Bhashkar Sharma

Product-focused generalist software engineer with an eye for detail.

I am passionate about great products and a company culture that fosters growth and helps people explore and learn. I have worked as the second employee in a fast-moving startup; and also in the team responsible for the user dashboard in a company with ~300 employees and millions in revenue. I have experience working both as an individual contributor and with wonderful teams, driving products from inception to launch – working closely with company founders, tech teams, and product managers. Have built web apps, mobile apps, REST APIs, and SDKs used by thousands of users scaling to millions of requests/day – working on both frontend and backend. Have experience handling customer support, hiring, interviewing and mentoring people. Have been involved with product decisions. Deployed products successfully at client locations, providing them with the support they needed. I strive for using clean patterns in code and a sane User Experience. Had the opportunity to give talks at tech conferences – JSFoo and Droidcon.

Education

College of Engineering Roorkee
B. Tech. in Information Technology • 2005-2009

Experience

Frontend Engineer Jun 2016-Present
Smaato Hamburg, DE

SPX
Creating the publisher Dashboard in Angular 5. Ownership of the build tooling and styling infrastructure of the product. Helped build test tooling for web and native SDKs.

Lead Engineer Aug 2015-Mar 2016
MobStac Bengaluru, IN

Beaconstac
Architected and implemented the backend APIs, user interface, Android SDK and App for the platform.

Senior Engineer Oct 2013-Jul 2015
MobStac Bengaluru, IN

CMXstac
Studied Cisco's CMX indoor location system; designed and built the backend, APIs and UI for management of rules, messaging and analytics.

MobStac for Developers
Created the framework, APIs and Javascript SDKs. Interacted with developers from development agencies and helped them get on board.

Core Platform Engineer Feb 2010-Sep 2013
MobStac Bengaluru, IN

Touchsite
Primary engineer and researcher for building a touch experience for websites. Researched a lot of cutting-edge technologies and implemented a solution that was later adopted by some of the big names in the Industry.

MobStac Publisher Platform
The first product we built at MobStac. I was involved in all aspects of design, architecting, building, integrating with external services and deploying the solution to be able to scale to millions of requests per day. Interacted with customers to understand their requirements. Handled customer support for a couple of years. Received the Responsiveness award multiple times. Was involved in interviewing, training and mentoring interns and new employees.
